The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply									
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).									
Status									
1) ⊠ §	Responsive to communication(s) filed on 1								
	This action is FINAL. 2b)⊠ This action is non-final.								
	Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under <i>Ex parte Quayle</i> , 1935 C.D. 11, 453 O.G. 213.								
Disposition of Claims									
5)□ (6)⊠ (7)□ (Claim(s) 1-16 is/are pending in the application. 4a) Of the above claim(s) is/are withdrawn from consideration. Claim(s) is/are allowed. Claim(s) 1-16 is/are rejected. Claim(s) is/are objected to. Claim(s) are subject to restriction and/or election requirement.								
Application	on Papers								
9) The specification is objected to by the Examiner. 10) The drawing(s) filed on is/are: a) accepted or b) objected to by the Examiner. Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a). Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d). 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.									
Priority u	nder 35 U.S.C. § 119								
 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f). a) All b) Some * c) None of: 1. Certified copies of the priority documents have been received. 2. Certified copies of the priority documents have been received in Application No. 3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)). * See the attached detailed Office action for a list of the certified copies not received.

Art Unit: 3623

DETAILED ACTION

1. The following is a Second Office Action in response to the application filed 6 July 2000. Applicant's amendment of 19 January 2004 did not amend the claims. Claims 1-16 are pending in this application and have been examined on the merits as discussed below.

Response to Amendment

- 2. The objection to the drawings in the First Office Action is withdrawn in response to the applicant's amendment to the specification and the proposed drawing correction to remove reference sign 790 from the drawings.
- 3. The objection to the abstract in the First Office Action is withdrawn in response to the applicant's amendment to the abstract.
- 4. The objection to the specification in the First Office Action is withdrawn in response to the applicant's amendment to the specification.

Response to Arguments

5. Applicant's arguments, see amendment, filed 19 January 2004, with respect to the rejections of claims 1-16 under 35 U.S.C. 102(b) have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of Simoudis et al. (U.S. Patent 5,692,107) and Anderson et al. (U.S. Patent 5,974,396). Applicant amended the specification to establish the relationship between the present application and co-pending U.S. Application Serial No. 09/476,729; therefore the rejection for public use or sale more than one year prior to the date of the

Application/Control Number: 09/610,704

Art Unit: 3623

application for patent has been withdrawn. Applicant argues that Depompa (Depompa, B., There's Gold in Databases; new tools will help companies extract valuable information, InformationWeek, CMP Publications Inc., n561, January 8, 1996, start p. 52 [DIALOG: file 148]) does not anticipate claims 1-16 because it does not show the use of integrating information stored in at least two disparate databases. Also, Applicant argues that there is no disclosure to identify at least one qualitative variable that is common to each database, then transform the at least one qualitative variable into one or more quantitative variables. Simoudis et al. teach generating predictive models in a computer system from a plurality of data sources and Anderson et al. teach analyzing consumer purchasing information based on product and consumer clustering relationships. The 35 U.S.C. 103(a) rejection follows.

Claim Rejections - 35 USC § 103

- 6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Simoudis et al. (U.S. Patent 5,692,107) in view of Anderson et al. (U.S. Patent 5,974,396). Simoudis et al. teach a method for generating predictive models in a computer system and Anderson et al. teach a method and system for gathering and analyzing consumer purchasing information based on product and consumer clustering relationships. Simoudis et al. and Anderson et al. do not expressly teach the specific data recited in claim 6; however, these differences are only found in

Page 4

Application/Control Number: 09/610,704

Art Unit: 3623

the non-functional descriptive material and are not functionally involved in the steps recited nor do they alter the recited structural elements. The recited method steps would be performed the same regardless of the specific data. Further, the structural elements remain the same regardless of the specific data. Thus, this descriptive material will not distinguish the claimed invention from the prior art in terms of patentability, see In re Gulack, 703 F.2d 1381, 1385, 217 USPQ 401, 404 (Fed. Cir. 1983); In re Lowry, 32 F.3d 1579, 32 USPQ2d 1031 (Fed. Cir. 1994); MPEP § 2106. Simoudis et al. disclose a process and system for integrating information from disparate databases for the purpose of predicting consumer behavior comprising:

- [Claim 1] identifying at least one qualitative variable which is common to each database (col. 5, lines 17-25, Simoudis et al. teach one module is used to define the query phrase while another module is used to present the retrieved data to the user. The examiner interprets the query phrase to be a qualitative variable.);
- transforming the at least one qualitative variable into one or more quantitative variables (col. 5, lines 17-25, Simoudis et al. teach one module is used to define the query phrase while another module is used to present the retrieved data to the user. The examiner interprets the retrieved data to be the quantitative variables.);
- converting, into converted information, the information in each of the databases in terms of the one or more quantitative variables (col. 3, lines 49-61, Simoudis et al. teach that one function of the server processor is to convert attributes and characteristics of a selected data source to those expected by the selected module. Thus, a type of impedance matching is performed by the server processor whenever a module is added to the system to transform the data form the data source to conform with the expected format of the selected module.); and
- forming an integrated database by combining, from the disparate databases, the converted information (col. 2, lines 16-27, Simoudis et al. teach a target data set, which may be a single one of the data sources or a subset of data selected form one or more data sources, is constructed.).

Simoudis et al. fail to teach the information is the consumer transactional information and the integrated database is for predicting consumer behavior. Simoudis et al. does teach a data mining system and method to generate predictive models (col. 2, lines 6-15), however, Anderson

Page 5

Application/Control Number: 09/610,704

Art Unit: 3623

et al. teach providing a retailer or a retail chain with the ability to process transactional information involving large numbers of consumers and consumer products by gathering product information that uniquely identifies a specific product by type and manufacturer, grouping that product information into product clusters, and analyzing consumer retail transactions in terms of those product clusters to determine relationships between the consumers and the products (col. 2, lines 56-66). It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to utilize consumer transactional information of Anderson et al. with the teachings of Simoudis et al. since Simoudis et al. teach the invention may be applied in a variety of embodiments, each of which depends on the types of data analysis modules and data sources made available to the system (col. 5, lines 59-62). Retail businesses are always looking for cost effective means to reach consumers and encourage them to shop at a particular store. Focused advertising and enticements on a previously identified groups helps encourages the identified groups to do business with the retail business. The focused approach reduces the amount of nonproductive advertising and improves the return on the advertising investment, therefore, producing a cost effective means to reach the consumer.

- [Claim 2] selecting at least one discriminating subset of the at least one quantitative variable to create statistical drivers (Anderson et al.: col. 2, line 59 to col.3, line 7, Anderson et al. teach product, consumer, and transactional data are maintained in a relational database. A retailer queries the relational database using selected criteria, accumulates data generated by the database in response to that query, and makes business and marketing decisions based on that accumulated data.);
- and creating clusters by assigning each consumer in the integrated database to at least one of the subsets (Anderson et al.: col. 3, lines 30-40, Anderson et al. teach means for grouping data into clusters of information based on predefined criteria.).
- [Claim 3] converting at least one discriminating subset into at least one supercluster; and assigning each subset and the consumers identified therein to one of the at least one super clusters (Anderson et al.: col. 11, line 41 to col. 12, line 25, Anderson et al.

Page 6

Application/Control Number: 09/610,704

Art Unit: 3623

teach product clusters allow a retail grocer to categorize 40,000 to 60,000 products into any smaller number of product clusters, e.g. 15 to over 100 product clusters. In the same way, a 100,000 to over a 1,000,000 consumers are summarized into anywhere from 6 to over 100 consumer clusters. The table at the to of col. 12 shows product clusters by product, cluster association, and general product clusters. The examiner submits the clusters can represent any view so desired by the user from detailed product specific clusters to general product clusters where general product clusters are superclusters that represents more that one specific product cluster.).

- [Claim 4] the at least one qualitative variable is a merchant and the one or more quantitative variable comprises one or more of the following: mean number of transactions per person for the merchant, mean amount per transaction for the merchant, mean household income of shoppers shopping at the merchant, and mean proportion of the shoppers for a particular area of the merchant (Anderson et al.: col. 11, line 41 to col. 12, line 25, Anderson et al. teach product clusters allow a retail grocer to categorize 40,000 to 60,000 products into any smaller number of product clusters, e.g. 15 to over 100 product clusters. In the same way, a 100,000 to over a 1,000,000 consumers are summarized into anywhere from 6 to over 100 consumer clusters. A consumer cluster report includes income: \$0-25,000. The examiner interprets a retail grocer to be a merchant.).
- [Claim 5] prior to forming the integrated database, weighting the one or more disparate databases to adjust for the differences in size and in time encompassed (Simoudis et al.: col. 5, lines 17-39, Simoudis et al. teach that in addition to the patterns being proposed by the user, the target data set supports additional important patterns that are identified only by intelligently exploring its contents. Data exploration, or bottom-up mining, results in the automatic generation of several patterns, or rules. Preferably, the rules making up the rule set are in the form of "if...then" hypothesis. The examiner interprets the rules generated include weighting.)
- [Claim 6] identifying industries which have discriminate shoppers and grouping selected merchants into the at least one discriminating subset (Simoudis et al.: col. 1, lines 9-13, Simoudis et al. teach data mining systems used to retrieve data from one or more designated databases, and extracts patterns and relations from data stored in databases to generate predictive models. Industries with discriminate shoppers and selected merchants are non-functional descriptive material and are not functionally involved in the steps recited nor do they alter the recited structural elements are indicated above.).
- [Claim 7] the consumer transactional information has instances of purchasing behavior by consumers for predicting the consumer behavior (Anderson et al.: col. 2, lines 56-66, Anderson et al. teach providing a retailer or a retail chain with the ability to process transactional information involving large numbers of consumers and

Application/Control Number: 09/610,704

· Art Unit: 3623

consumer products by gathering product information that uniquely identifies a specific product by type and manufacturer, grouping that product information into product clusters, and analyzing consumer retail transactions in terms of those product clusters to determine relationships between the consumers and the products. Simoudis et al.: col. 1, lines 9-13, Simoudis et al. teach data mining systems used to retrieve data from one or more designated databases, and extracts patterns and relations from data stored in databases to generate predictive models.).

[Claim 8] at least one of the disparate databases includes joint account information for at least two consumers, and further comprising the step of determining a consumer of the at least two consumers who generated at least a portion of the consumer transactional information (Anderson et al.: col. 15, Anderson et al. teach "CARD_MEMBER" and describes the card member as an individual card member within a consumer household. "HH_PURCH_HISTORY" is the household purchase history and is described as a trail of data and total amount of a consumer's household purchase history means joint account information for at least two consumers and the card member serves as the means to which consumer consummated which transactions.).

Claims 9-16 substantially recites the same limitations as that of claims 1-8 with the distinction of the recited method being a system. Hence the same rejection for claims 1-8 as applied above applies to claims 9-16.

Art Unit: 3623

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael C. Heck whose telephone number is (703) 305-8215. The examiner can normally be reached Monday thru Friday between the hours of 8:00am - 4:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Tariq R. Hafiz can be reached on (703) 305-9643.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-1113.

Any response to this action should be mailed to:

Director of the United States Patent and Trademark Office P.O. Box 1450 Alexandria, Virginia 22313-1450

Or faxed to:

(703) 872-9306 [Official communications; including After Final communications

labeled "Box AF"]

(703) 746-9419 [Informal/Draft communication, labeled "PROPOSED" or

"DRAFT"]

Hand delivered responses should be brought to Crystal Park 5, 2451 Crystal Drive, Arlington, Virginia, and the 7th floor receptionist.
